7th June 2019

Meeting report

During the today's meeting my supervisor and I defined three main steps to do in the next week:
1. Create a Google Form for getting the list of DH journals. The form will be submitted to Domain experts, starting from Italian at the beginning and then It will be sent at the DH conf in Utrecth.
2. Complete the internship project taking into acount Dimension.
3. Run the Leiden algorithm over COCI

Create the authority list of DH journals

In the same way I did during for the internship project, I must find a way to create a list of DH journals. While there are some unstructured indexes (eg. [list of dh journals, Berkley](https://digitalhumanities.berkeley.edu/resources/digital-humanities-journals)), for our aims we need to create a structured list with some important metadata such us [ERIH PLUS](https://dbh.nsd.uib.no/publiseringskanaler/erihplus/periodical/listApproved).

The idea is to create the list asking researchers to create a list of DH-related journals:
1. ISSN *optional*
2. Journal title *mandatory*
3. URL *optional or mandatory*
4. Percentage of DH publications within the journal *mandatory (probably is better to request natural language)*

having the Journal title (maybe URL is better) is possible to retrieve all the other metadata manually. Is very interesting to have the **perceived** quantity of DH publications to make a final comparison between what is perceived and what is real.

Results

- Monday the Google form scratch will be developed
- Access requested to the CWTS db (remote access to the server and Leiden University Account have been already get)
